

TECHNOLOGY

is
a means,
NOT AN END.

RESOURCES
are energy

A GREAT PRODUCT
IS EVEN BETTER IF
NO RESOURCE IS WASTED.

We've spent uncountable nights coding just for the sake of solving problems. We know how it feels to be one with the code. We're geeks, before it was trendy.

We know how to reduce the gap between complex research techniques and business needs. A tight schedule doesn't mean you cannot innovate.

Research is the engine

User
is king

Our customers might not always be right, neither do we. Users are always right. Period.

CORVALIUS

MANIFESTO

We know that uncertainty and ambiguity are ubiquitous and define business needs. We need to move forward. Heuristics are here to stay and we're here to take advantage of them.

the
harder,
the
better.

TRANSPARENCY
AS A SERVICE

We cannot work well in environments where there is no transparency on each end. Believe us, you don't want to be there.

Yes, we do easy jobs. But we rather do the hard ones.

Empathy

THE is
key

Our customer's problem is our problem. Solutions are out there. They're always out there.

A problem is always many problems at the same time.

problem
problem
problem

Solving a problem is solving it for good. Software is sometimes just the tip of the iceberg.
